for your own safety READ THE FACTS ABOUT ELECTRIC FUSES... then check the fuses you are using—today! All fuses look alike until you check the number at the base. 15 is the only fuse that should be used with wires feeding individual rooms. 20 has a special use in homes wired since 1940. Used in larger wires feeding laundry, dining room and kitchen. 30 fuses should be used only as main fuses where two wires feed electricity into the home. NOTE: No. 25 fuses are not made for home use and should never be used. IF FUSES BLOW it's a warning that something is wrong. Don't put in a large number fuse or a penny, that fails to warn. Instead, call a reliable electrician. Phone or write for a free folder about safe wiring. Niagara Mohawk Power Corporation
